Mimetic Mhouse is made in Italy

OPERATING PRINCIPLES

The design of Mimetic-Mhouse is based on behavioural studies of rodents. The Alpha Male (pack leader) responsible for finding secure sources of food for the colony, has the time to satisfy his hunger and feel safe before being caught. After the capture of the rodent, through the articulated and patented lever system, the mechanism is automatically ready to use again - ready for its' next catch. This innovative system allows you to not contaminate the odorous traces left by the Alpha Male. Other rodents, following the odorous traces left by their leaders, will follow the path that will lead to their capture. In this way, Mimetic-Mhouse can eliminate the infestation in a very short time without any risk to people, pets and the environment.

FEATURES AND ACCESSORIES

HANDLES FOR TRANSPORT

The ventilation holes are essential for the emanation of odours from natural attractants and are intended to deceive the rodent into thinking that the internal path of the Mimetic-Mhouse will lead to an external pipes or drains. The same holes present on the outside of Mimetic-Mhouse can be used to anchor the comfortable handles when moving the trap.

BRACKET FOR WALL FIXING

Special galvanized metal brackets allow the fixing of Mimetic Mhouse to the wall or for any type of fixing required.

SAFETY:

Mimetic-Mhouse is equipped with a special safety locking screw and a special slot into which a tamper-resistant lock can be inserted.

SCOOP COLLECTION CATCH

Each Mimetic-Mhouse can be equipped with a special scoop for the catch extraction, stored in an internal slot.

NATURAL ATTRACTANTS

Mimetic-Mhouse, using only natural attractants, is safe for any location, even the most sensitive.

Mimetic-Mhouse eliminates the fear factor for rodents thanks to internal feeding sections that allow the alpha male to satisfy his hunger and feel safe. Special inaccessible feeding sections inside Mimetic-Mouse ensure the constant presence of natural attractive for a long period.

CURIOSITY

Mimetic-Mhouse takes full advantage of the curiosity of rodents: three specially designed entryways (different than any other trap), internal and articulated ladder, as well as sections for natural attractants eliminate the typical effect of rodent distrust.

COVER CAMOUFLAGE

Mimetic-Mhouse has another important advantage, it can be camouflaged in its surrounding environment. Use the Cover that blends best with the background, so that it is disguised and invisible even to the most careful of observers.
